Use this button to upload the CSV File.

Use this button to download a sample CSV file to build person data for uploading details on to Server. Do not change the headers of CSV file, as it is required for parsing

Uploading

USERS

Upload CSV

Download Sample CSV

Please use the same Format in Sample CSV! Download the sample CSV by clicking the Download Sample CSV Button and insert the data. Don't change the headers of the CSV file.

Upload

Choose file

No file chosen

Submit

Row	First Name	Last Name	Email	Phone	Errors	Actions
1	Test1	One	csvone@test.com	1234567890		

After choosing the CSV file, press the submit button.

CSV file must contain a header row with following inputs

1. First Name
2. Last Name
3. Email
4. Phone No

You can also download the Sample CSV file by clicking 'Download Sample CSV' button and update the details on the same, without changing the headers on the downloaded sample.

Email is too short
(minimum is 4 characters).

Save

After uploading the CSV, the data will get parsed and displayed on the table.

If any error occurs, due to validations, it will be displayed like the last entry as shown in the above image and the errors will also be displayed under the error column. Using the save button, we can save the details after updating the user details without any error.
